

# THE IRVING TERMINAL: DISPENSE WITH THE FAMILIAR

By the year 2020, more than 70% of the world's population will be using smartphones\*. Our mobile devices are as much a part of our daily lives as our wallets and purses — and for digital natives, they're often the most important accessory. Irving is designed to meet this emerging trend head on, with automation technology that reinvents fundamental self-service interactions: cash-in and cash-out. Differentiate your brand and delight your consumers with a terminal that eliminates unnecessary components while enabling a true omnichannel experience.

**Bring-your-own-device (BYOD) access offers a natural extension to a commonly used device (the mobile phone), and eliminates the need for a physical screen, card reader and PIN pad:**

- Users can be authenticated through Near Field Communication (NFC), Quick Response (QR) Code or biometrics.
- Consumers can schedule transactions via mobile, rather than entering a PIN at the terminal.
- Eliminating components reduces complexity — driving down the total cost of ownership — and minimizes opportunities for fraudulent activity.

#### **IT'S FAST.**

Withdraw cash in less than 10 seconds with cardless authentication.

#### **IT'S SECURE.**

Transact through a secure mobile wallet, with no cards to swipe or PINs to enter.

#### **IT'S CONVENIENT.**

Use a smartphone, a device that's familiar, intuitive, and always available.

**DISCOVER THE BENEFITS OF A MODERN, MOBILE-ENABLED APPROACH TO SELF-SERVICE BANKING.
